

Release-aware public-source overlap audit

A bounded reporting method with explicit temporal, chemical, and provenance contracts

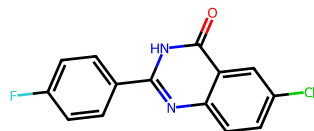

1. Declare anchor

benchmark event +
documentary evidence

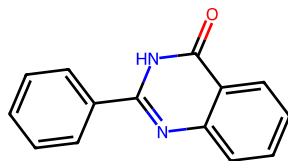

2. Standardize structures

SMILES → identity keys →
parent scaffold

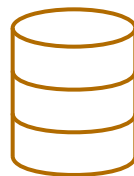

InChIKey

RYHCXQGCYVWFQT-UHFFFAOYSA-N

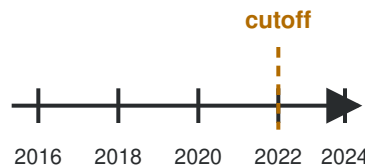

3. Index public releases

first-seen records within
declared panel

release-indexed records

4. Audit chemical relations

exact identity · scaffold · public NN

exact identity

shared scaffold

public NN

public-source relation set

training NN kept separate

5. Emit auditable profile

source tables · hashes · reporting actions

structured report

CSV

SHA-256
